MONITOR
Synthetic users send 2 req/s;
a request is good when it
returns 200 OK within 300 ms.
Prometheus scrapes every 5 s.
ANALYZE
Page when the error budget
burns over 14.4 times too fast in
both the last minute and the last
20 s. The agent confirms with its
own probe.
KNOWLEDGE
SQLite: every trial,
step and incident,
with post-mortems
EXECUTE
An Ansible playbook runs it.
A step heals after 3 healthy
seconds; the incident closes after
5, otherwise the next step runs
(at most 3).
PLAN
A policy proposes one action
from the symptoms. The safety
validator checks it; a high-impact
action waits for a human.
